The Genetic Revolution is Providing a Shift Towards Personalized Recommendations

What is Personalized Medicine?

- Using information about a person's genetic makeup to tailor strategies for the detection, treatment, or prevention of disease.
- Using molecular profiling technologies to assess DNA, RNA, protein, and metabolites to tailor medical care.
- Approach has the promise of delivering the right dose for the right indication to the right patient at the right time.

NIH and Precision (Personalized) Medicine

All of UsSM Research Program

WHAT IS IT?

Precision medicine is a groundbreaking approach to disease prevention and treatment based on people's individual differences in environment, genes and lifestyle.

The *All of Us* Research Program will lay the foundation for using this approach in **clinical practice**.

WHAT ARE THE GOALS?

Engage a group of **1 million or more U.S. research participants** who will share biological samples, genetic data and diet/lifestyle information, all linked to their electronic health records. This data will allow researchers to develop more precise treatments for **many diseases and conditions**.

Pioneer a new model of research that emphasizes **engaged research participants, responsible data sharing and privacy protection**.

Research based on the cohort data will:

- Lay **scientific foundation** for precision medicine
- Help identify new ways to **treat and prevent disease**
- Test whether **mobile devices**, such as phones and tablets, can encourage healthy behaviors
- Help develop the **right drug** for the **right person** at the **right dose**

WHY NOW?

The **time is right** because:

We have a greater understanding of human genes

People are more engaged in healthcare and research

We have the tools to track health information and use large databases

Research technologies have improved

Follow the Program's progress and be one of the first to join this landmark effort.

Environmental Influences on Child Health Outcomes (ECHO)

The basics

NIH plans to support **multiple studies** using **existing cohorts** (groups of women & children who have already participated in other research studies) to answer questions about the effects of a broad range of **environmental factors on child health & development**. This approach will allow the NIH to combine data and maximize the use of this existing resource set to answer questions that could not be addressed by each study alone.

Environmental factors include physical, chemical, biological, behavioral, & social, etc.

The ECHO program will allow researchers to **maximize the use of existing resources** such as collections of biological tissues collected during pregnancy and delivery, **leverage available data sets** by funding additional analyses, **develop a repository** on the trajectory of health development, and **develop statistical models to predict disease development**, and **test new tools and approaches** for environmental and pediatric monitoring.

What we hope to learn

ECHO at its core

In addition to each investigators' specific research questions, all of the ECHO studies will be expected to collect standardized information (Core Elements) on:

- Demographics
- Typical health and development
- Genetic influences on child health and development
- Environmental factors
- Patient/person-reported outcomes (PROs)

The top priority focus areas for ECHO-funded studies are four pediatric health outcomes with high public health impact:

- Upper and lower airway
- Obesity
- Pre-, peri-, and postnatal outcomes
- Neurodevelopment

ECHO will also create an IDeA States Pediatric Clinical Trials Network leveraging existing IDeA infrastructure to address access gaps for rural children.

ECHO's target areas

Can your genes tell you how to focus your diet for disease prevention?

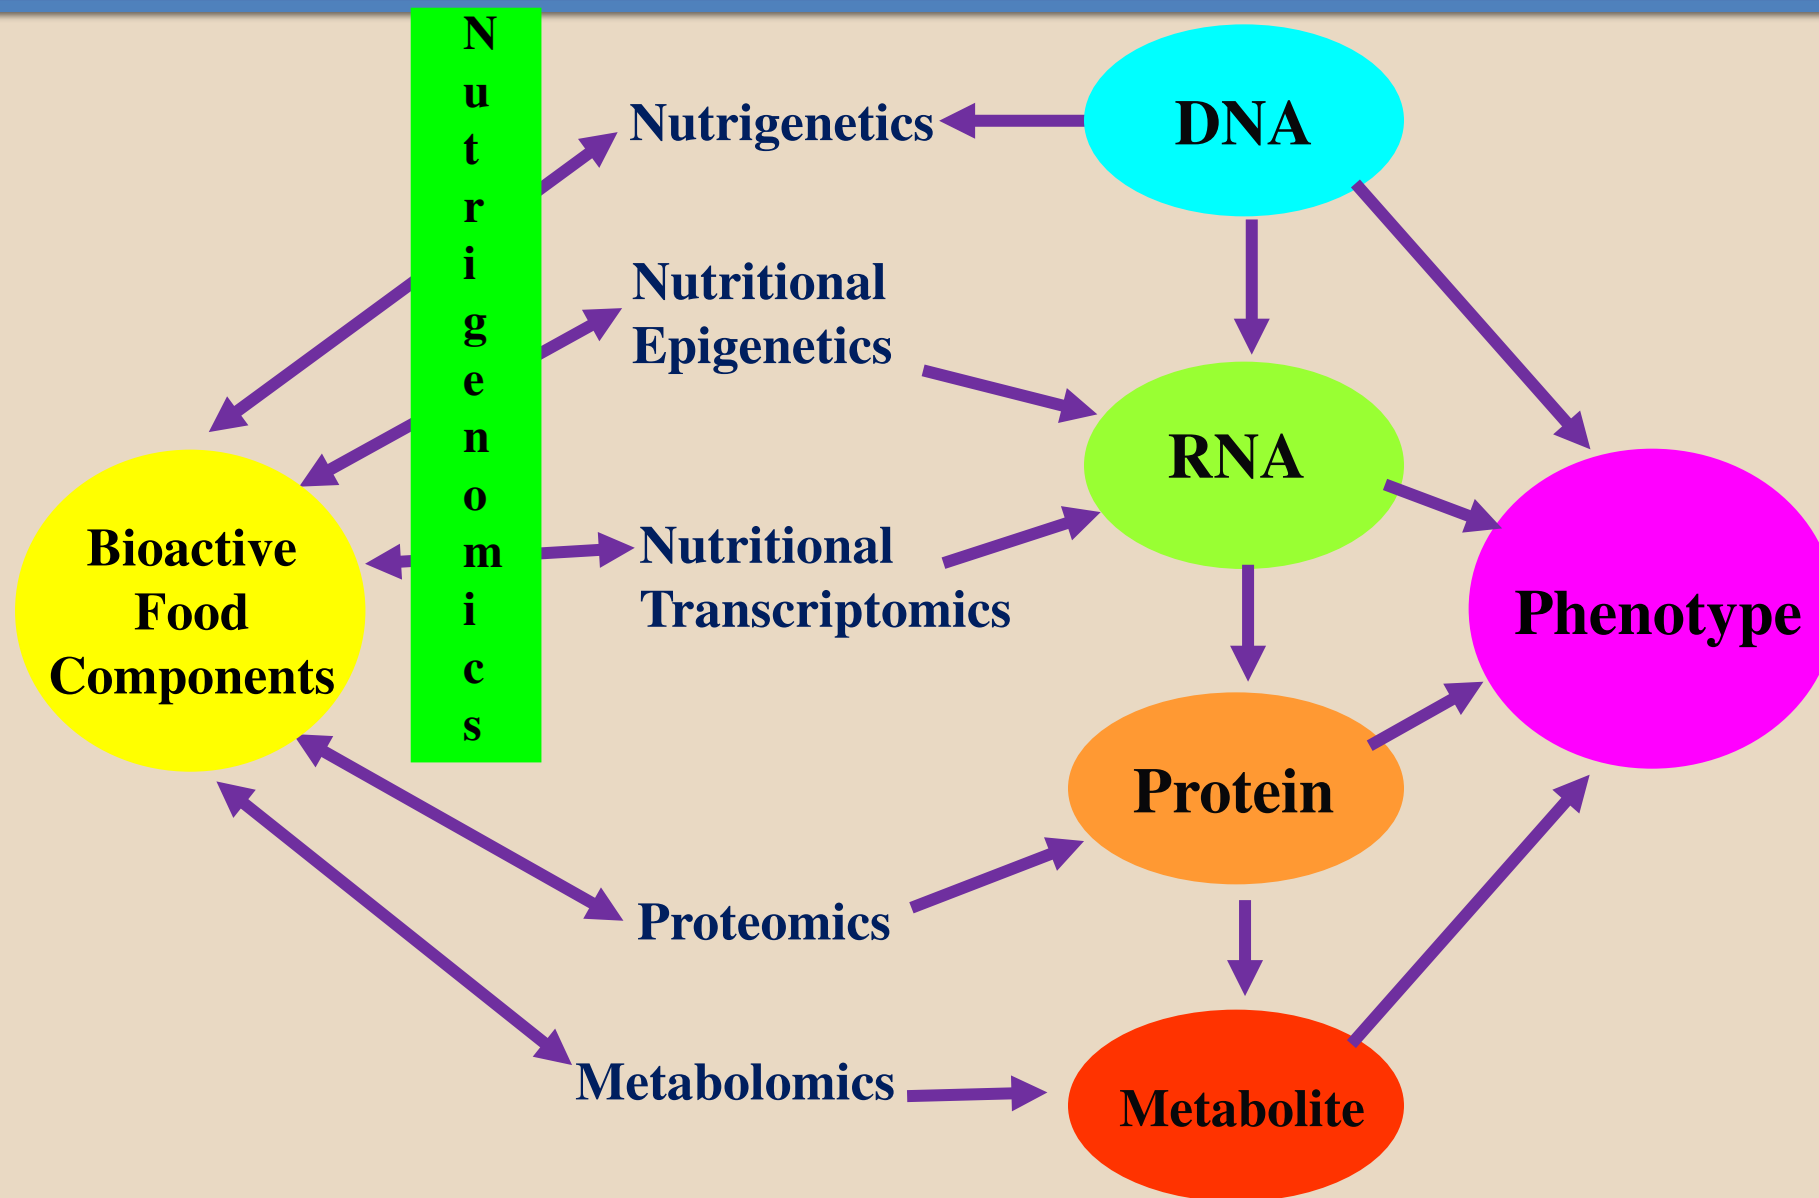

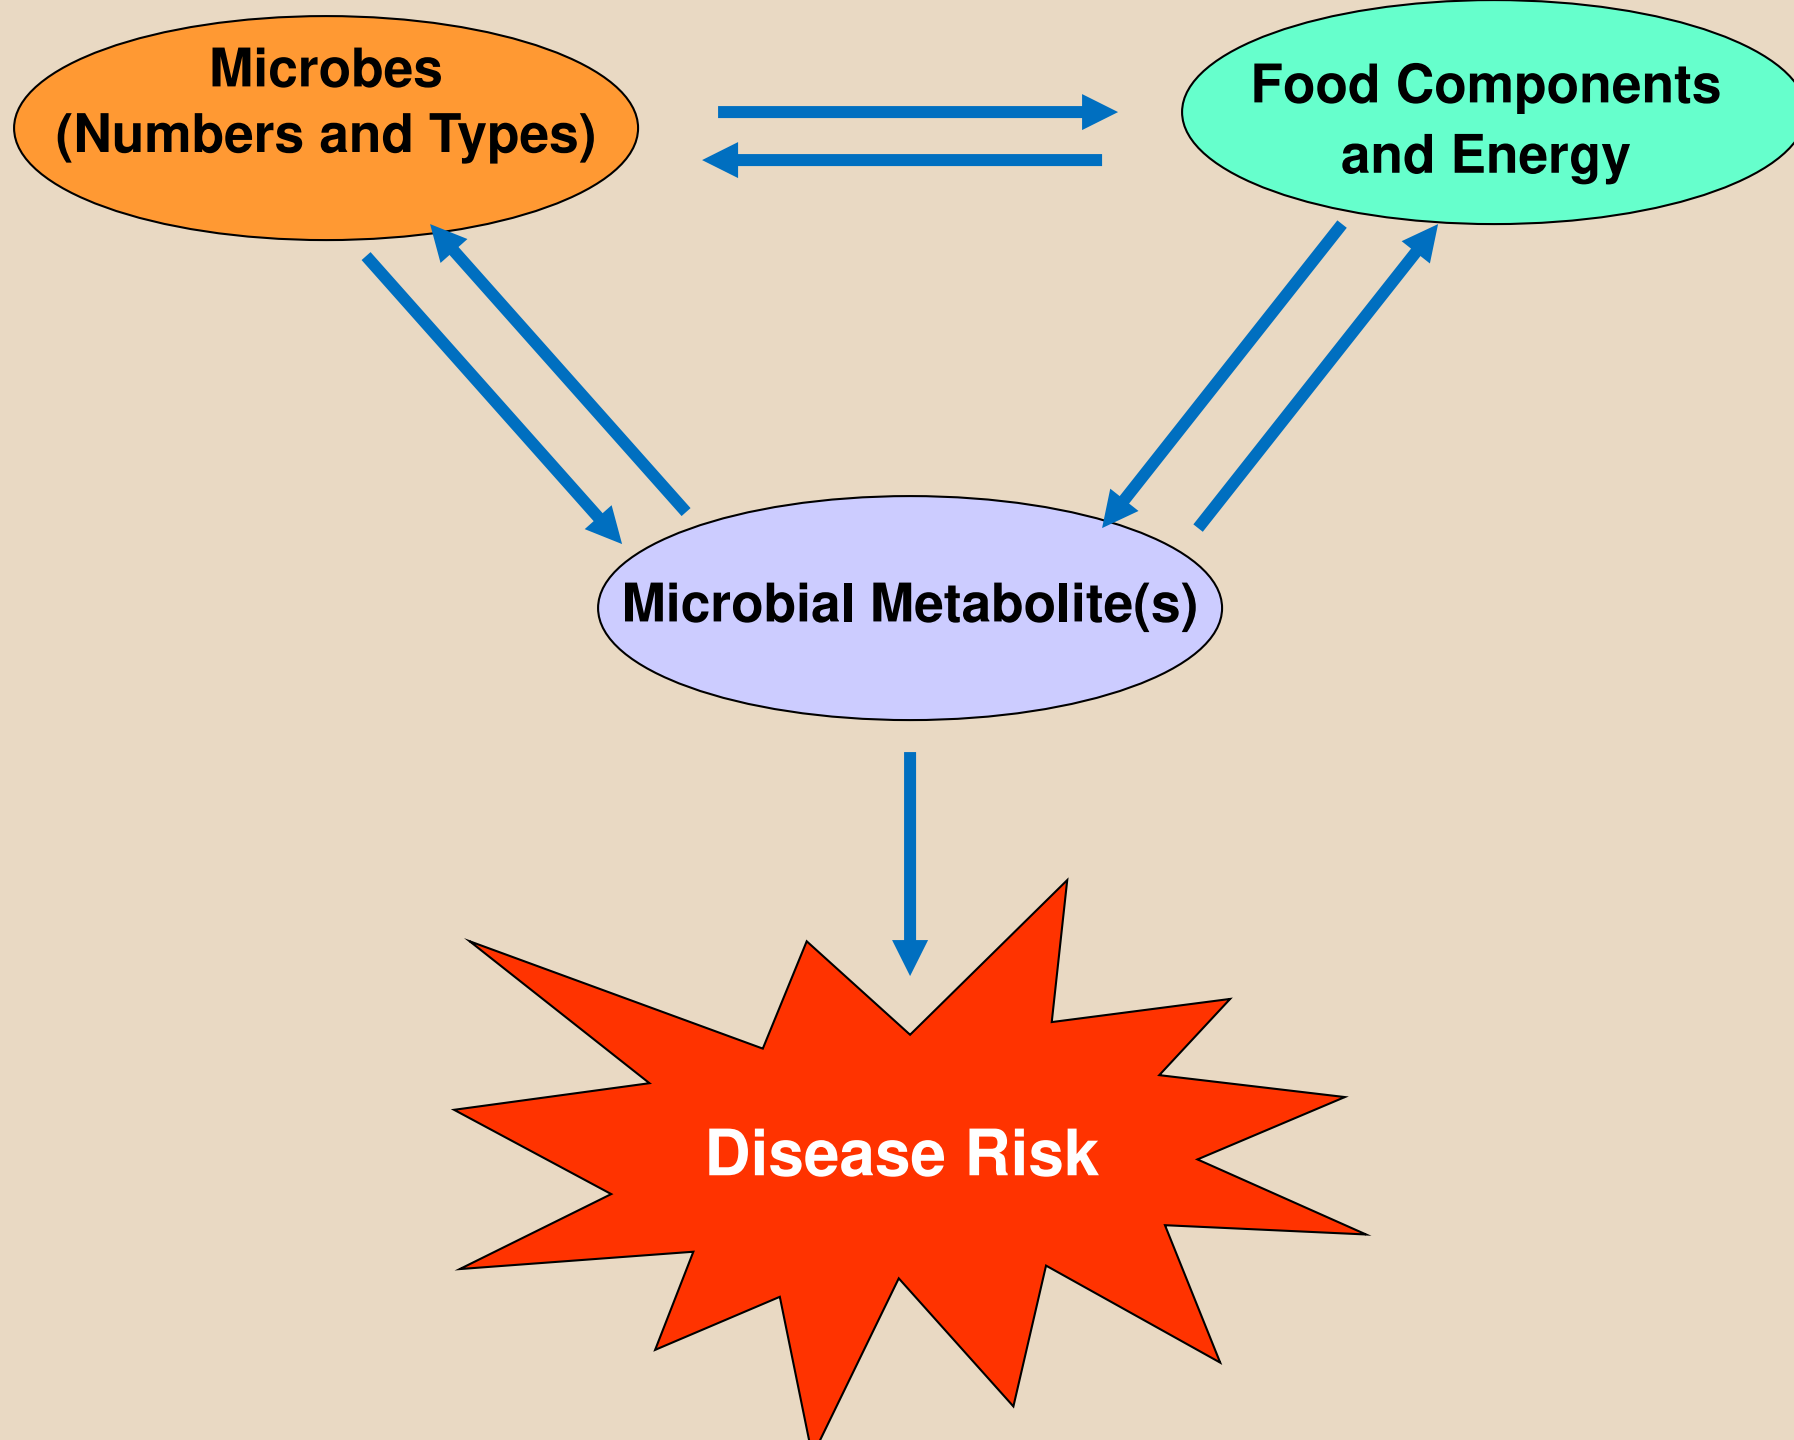

Nutrigenomics

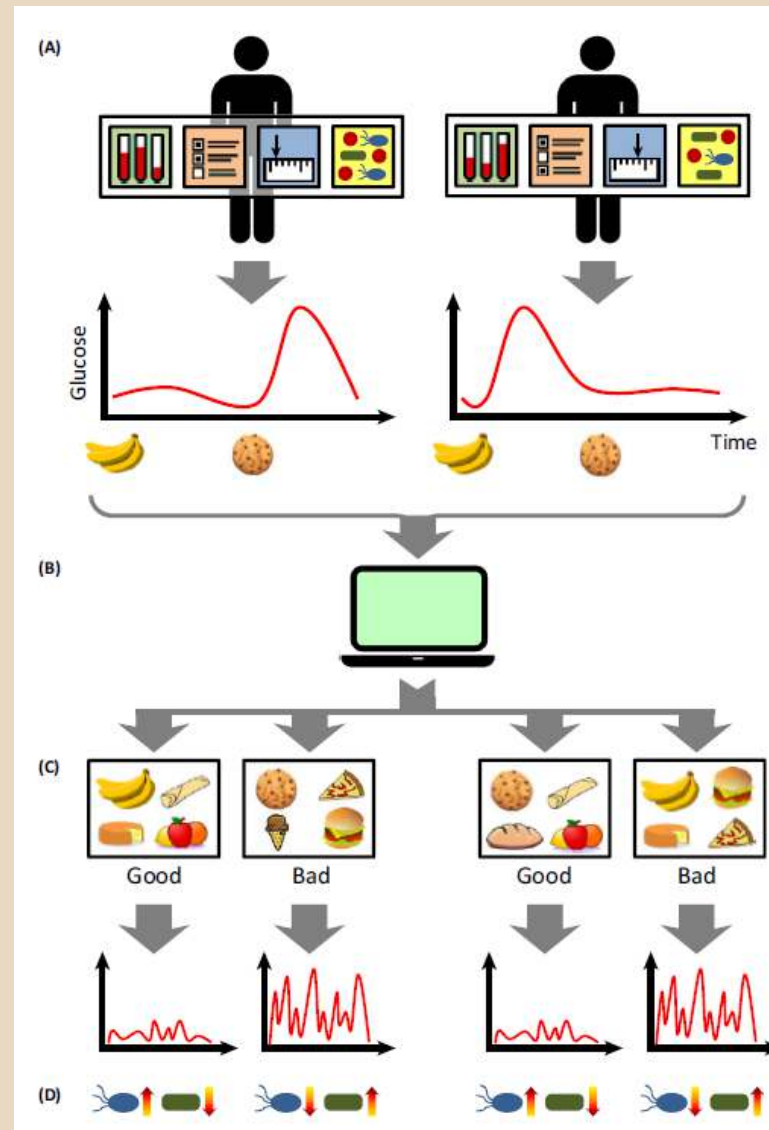

A discipline that investigates the effects of dietary components on the structure, function, and regulation of coding and non-coding DNA segments of all genes present in the genome of a given species.

Using the “Omics” of Nutrition to Identify Responders from Non-Responders to Diet for Disease Prevention

Personalized Nutrition and Glycemic Response

National Nutrition Research Roadmap

- Released on March 4, 2016 by the Interagency Committee on Human Nutrition Research (ICHNR).
- The 5 year roadmap “encourages an increased focus on research that can lead to more **individualized advice** for promoting health and preventing disease”.
- Roadmap identifies 3 key questions that cover a broad spectrum of research:
 1. How do we better understand and define eating patterns to improve and sustain health?
 2. What can be done to help people choose healthy eating patterns?
 3. How can we develop and engage innovative methods and systems to accelerate discoveries in human nutrition?

National Nutrition Research Roadmap- Role of the Different Federal Agencies

Agency	Commerce	DoD	EPA	FTC	HHS	NASA	USAID	USDA	VHA
Question 1: How do we better understand and define eating patterns to improve and sustain health?									
Q1T1 Health Promotion and Disease Prevention and Treatment	X	X		X	X	X	X	X	X
Q1T2 Individual Differences Including "Omics"		X			X	X		X	X
Q1T3 Population-Level Monitoring	X	X	X		X		X	X	X
Question 2: What can be done to help people choose healthy eating patterns?									
Q2T1 Influences on Eating Patterns	X	X		X	X	X	X	X	X
Q2T2 Interventions		X		X	X	X	X	X	X
Q2T3 Systems Science					X				X
Q2T4 Environmental Sustainability	X	X					X	X	X
Question 3: How can we develop and engage innovative methods and systems to accelerate discoveries in human nutrition?									
Q3T1 Assessing Dietary Exposures	X	X	X	X	X	X	X	X	X
Q3T2 Biobehavioral Science		X			X	X	X	X	X
Q3T3 Behavioral Economics		X		X	X			X	X
Q3T4 Big Data	X	X		X	X		X	X	X

Development of NIH-Wide Strategic Plan on Nutrition Research

- **The National Institutes of Health Nutrition Research Task Force (NRTF) was established in October 2016 to coordinate and accelerate progress in nutrition research across the NIH.**
- **Dr. Christopher Lynch, director of NIDDK's Office of Nutrition Research, serves as the task force executive secretary.**
- **NRTF is guiding the development of the first NIH-wide 10-year strategic plan for nutrition research.**
- **The Task Force is chaired by the directors of 4 institutes (NIDDK, NCI, NHLBI and NICHD).**
- **NRTF will appoint a senior leadership group to guide implementation of the plan once it is complete.**

Proposed NRTF Strategic Planning Timeline

*Deadlines included in NRTF charter.
