NEW YORK—An outbreak of Legionnaires' disease in the Bronx has killed seven people and sickened more than 80 others, the largest outbreak of the bacterial infection in New York City's history and one of the biggest in the U.S. in recent years.

Sickened

In the U.S., about 4,600 cases of Legionnaires' disease were reported last year, according to the CDC.

Deadly brain amoeba infects US tap water for the first time

Maggie Fox, NBC News

Sep. 16, 2013 at 4:35 PM ET

Centers for Disease Control and Prevention

The CDC says it's found *Naegleria fowleri*, an almost always deadly amoeba, in a U.S. drinking water supply for the first time.

A deadly brain amoeba that's killed two boys this year has been found in a U.S. drinking water supply system for the first time, officials said Monday -- in a New Orleans-area system.

Chemicals cause changes in fish and raise concerns for humans

By Launce Rake <lrake@lasvegassun.com>

Las Vegas Sun

There's something wrong with the fish.

It's been confounding scientists for years: Male fish are developing female sexual characteristics in Mead and other freshwater sources around the country.

On Thursday, the U.S. Geological Survey released a four-page summary of more than a decade of studies linking wastewater chemicals to those changes.

Water tainted by traces of discarded drugs could upset the delicate dynamics of the marine environment, scientists say.
Bent Christensen, The Associated Press

Fish on drugs more likely to drop out of schools, study says

Potable Water Reuse

OCT 08 2013

OFFICE OF THE GOVERNOR

To the Members of the California State Senate:

I am signing SB 322 which requires the Department of Public Health in consultation with the State Water Resources Control Board, to investigate the feasibility of developing uniform water recycling criteria for direct potable reuse by September 2016.

This information is past due. In an effort to enhance the use of recycled water, I have proposed the consolidation of the management of the drinking water program and all other water quality programs, including recycled water, under the State Water Board.

I am directing the Water Board to ensure that this work is completed expeditiously. The 3-year time frame mandated in this bill is too slow. California needs more high quality water and recycling is key to getting there.

Sincerely,

Edmund G. Brown Jr.

Potential Contaminants

Biologicals are ACUTE Risks

Viruses

Bacteria

Parasites

Prions

Chemicals are CHRONIC Risks

Organic and Inorganic

Volatile and non-volatile

Metals and Salts

1899 – US Rivers and Harbors Act

Required Permit to Discharge Refuse into Navigable Waters or Tributaries.

Also required permit to build dam or alter waterway flow.

1914 & 1962 – Public Health Service

- Monitored coliform bacteria in water
- Metals added in 1925
- Distribution system added in 1942
- Significantly re-written in 1962

Safe Drinking Water and Clean Water Acts

- EPA Enforced Regulations (often enforced by states)
- SDWA 1972
 - MCLs & MCLGs
- CWA 1977
 - Discharge permits
 - Ambient WQ
