Insights on "diet"

"Diets are complex exposures with innumerable and sometimes poorly characterized components that are consumed in varying amounts and combinations."

Dietary variables: the entire population is "exposed" to some degree.

Diet is dependent of exposure time, of individual

dietary habits and food composition.

Satija A. Adv Nutr 2015

Systematization of dietary intake data

HARVARD SCHOOL OF PUBLIC HEALTH SPECIAL PRENATAL STUDY

First dietary assessments

221 LONGWOOD AVENUE, BOSTON, MASSACHUSETTS
One Complete Day's Record of Food Eaten
Directions:
Orange juice or fruit: State number of oranges and size used.
Other fruit: State kind, number or size of serving (1 small sauce dish = 1/2 measuring cup, 4 rounding theps." = 1/2 cup, 16 level theps. = 1 cup).
Conal: State amount as rounding theses. or in terms of measuring cup.
Bread: State number of slices, and if purchased as sliced bread. If not, state thickness as 1/4 or 1/2 inch or whatever it is.
Butter: Record as level tsps. (1 par = 1 level tsp. 1).
Egg: Check'ss to whether whole egg or yolk only.
Baten: Number of slices-indicate whether long (full length) slices or 1/2 slices.
Milk: Amount on cereal-state in terms of measuring cup. If top milk or cream used, cross out milk. State cream light, medium, or heavy. Cup refers to measuring cup. 1 ordinary drinking glass = 34 cup. 1 tall glass (iced tea glass) = 114 cup. Where it states milk or cream, cross out one not used.
Sugar: Give as level tsps.
Other foods: Record as accurately as possible in ordinary household measures any foods earch not listed.
Must or Fish: 1 small serving meat or fish = 1 oz. = 2 tbsps. 1 average serving meat or fish = 3 oz. 1 large serving meat or fish = 4 oz.
Vegetables: Record in rounding theps. (1 ordinary small saucer of vegetables = 1/2 cup = 4 rounding theps.)
Dessert:
Average serving = $\frac{1}{2}$ cup. Milk or sauce, etc., added should be recorded and amount stated.
* Tablespoon = thep.

Global dietary quality scores

	Score based on greater consumption of ten healthy dietary items	Score based on lesser consumption of seven unhealthy dietary items	Score based on 17 dietary items
Global	44·0 (10·5)	52.1 (18.6)	51·9 (9·3)
Sex			
Men	42·4 (10·5)	50.6 (18.8)	50·3 (9·4)
Women	46.0 (10.6)	53.8 (18.5)	53.7 (9.3)
p value*	<0.0001	<0.0001	<0.0001
Age, years			
20–29	36.0 (10.0)	45·8 (18·5)	44.0 (9.4)
30-39	39.4 (10.3)	46.3 (18.6)	46.5 (9.6)
40-49	42·2 (10·7)	47.9 (18.7)	49.0 (9.7)
50-59	4 <mark>4·4 (10</mark> ·7)	50.4 (18.4)	51·5 (9·4)
60–69	45.9 (10.7)	53-2 (18-1)	53.6 (9.0)
70-79	45.6 (10.8)	54.0 (18.0)	53.7 (8.9)
≥80	44·7 (10·7)	54·2 (18·0)	53·2 (8·9)
p value for trend*	<0.0001	<0.0001	<0.0001
Country income level			
High (n=47)	47.0 (9.3)	37.4 (11.2)	48·6 (8·1)
Upper middle (n=53)	45.2 (11.3)	46·2 (12·8)	50.1 (8.7)
Lower middle (n=51)	40.9 (10.9)	55.0 (15.3)	51.1 (9.4)
Low (n=36)	42.9 (9.6)	75·9 (12·5)	59·9 (7·3)
p value for trend*	0.0005	<0.0001	0.0006

Data are mean (SD). Possible range of each score is from 0 (less healthy) to 100 (more healthy). *p values for differences by sex or across ordinal categories of age or country income were estimated using hierarchical regression analysis accounting for age-sex distribution. Age, sex, and country income (high, ≥US\$12 475; upper middle, US\$4037-12 474; lower middle, US\$1025-4036; low, <US\$1024) were mutually adjusted when assessing statistical significance of each.

Table 2: Global dietary patterns among men and women in 187 countries in 2010

Women

Older adults

Lower income

Imamura F., NUTRICoDE. The Lancet 2015

Dietary patterns based on more healthy items

Global dietary pattern

Dietary pattern based on more healthy items

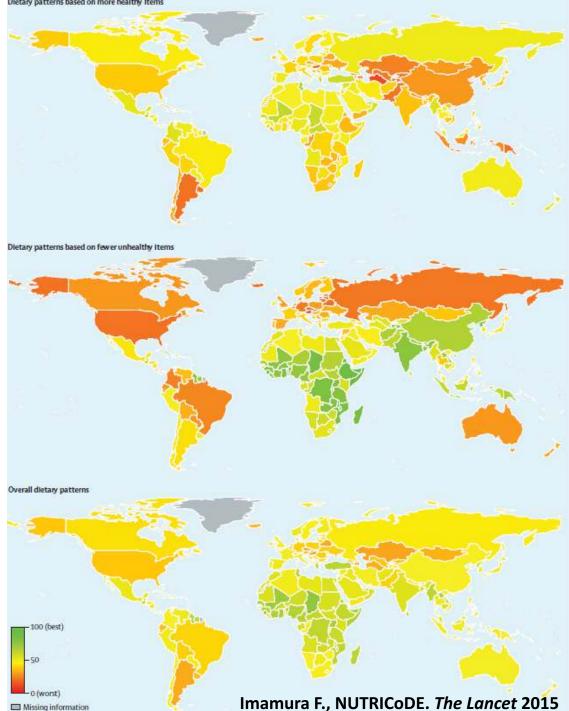

Whole grains, Fruit, Vegetables, Fish, Nuts and seeds, Beans, Milk, Dietary fiber, Polyunsaturated fat, Omega-3 fat

Dietary patterns based on fewer unhealthy items

Sugar-sweetened beverages, Processed meats, Unprocessed red meats, Saturated and Trans fat, Cholesterol and Sodium

Overall dietary patterns

Values represent degrees of adherence to each dietary pattern, ranging from 0 (least healthy) to 100 (most healthy)

RESEARCH ARTICLE

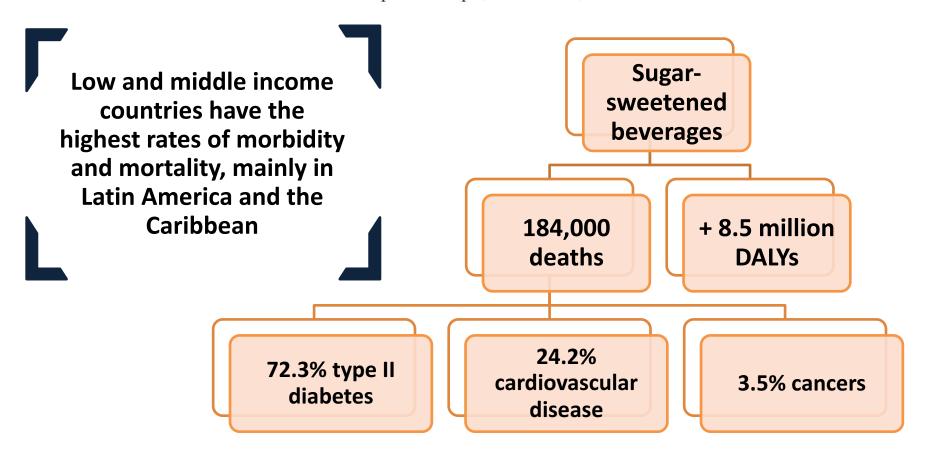

Global, Regional, and National Consumption of Sugar-Sweetened Beverages, Fruit Juices, and Milk: A Systematic Assessment of Beverage Intake in 187 Countries

Circulation. 2015;132:639-666. DOI: 10.1161/CIRCULATIONAHA.114.010636.

Estimated Global, Regional, and National Disease Burdens Related to Sugar-Sweetened Beverage Consumption in 2010

Gitanjali M. Singh, PhD; Renata Micha, PhD; Shahab Khatibzadeh, MD; Stephen Lim, PhD; Majid Ezzati, PhD; Dariush Mozaffarian, MD, DrPH; on behalf of the Global Burden of Diseases Nutrition and Chronic Diseases Expert Group (NutriCoDE)*

Conclusions

 Dietary patterns allow us to evaluate quality of the diet or meals

Which are the groups of risk in different populations and

What are the association factors with health outcomes
